

Python ALA:- 3 Reverse a String:

- Java code:

```
str_val = "Hello"

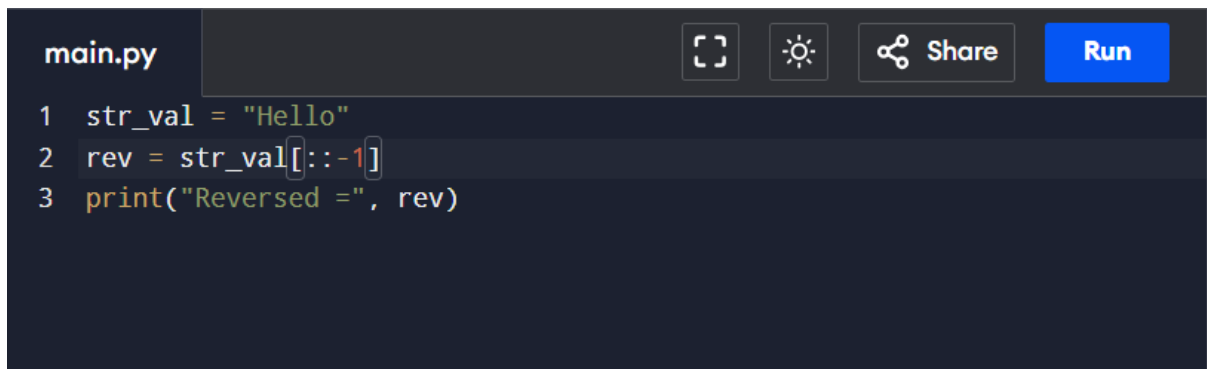

# Reverse the string using slicing

rev = str_val[::-1]

# Print result

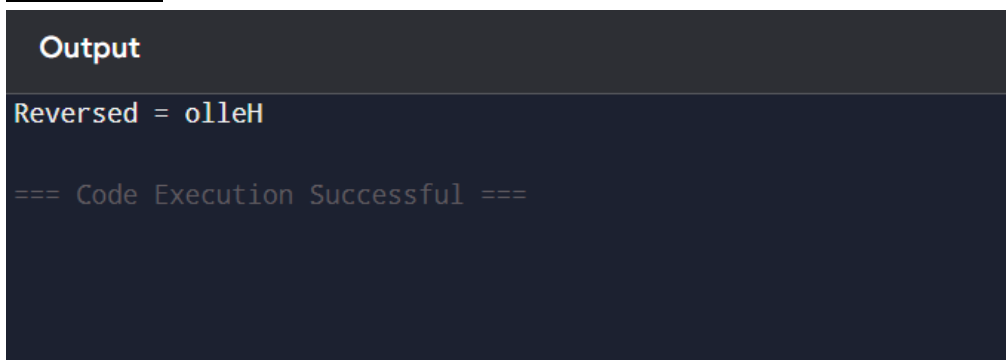

print("Reversed =", rev)
```

- Python code:

A screenshot of a code editor window titled 'main.py'. The editor has a dark theme. At the top right, there are icons for a code playground, a sun (theme toggle), a share icon, and a blue 'Run' button. The code is as follows:

```
1 str_val = "Hello"
2 rev = str_val[::-1]
3 print("Reversed =", rev)
```

- Output:

A screenshot of an output window with a dark theme. The title bar says 'Output'. The text displayed is:

```
Reversed = olleH

=== Code Execution Successful ===
```
